SAVE OUR SHARKS

Australia is a global shark and ray "hotspot" with around one-quarter of the world's shark and ray species calling our waters home. A total of 322 species are found in Australian waters, half of which are endemic – that is, they're found nowhere else in the world¹.

The biggest threat to our endemic Aussie sharks and rays is trawling on or near the sea floor, sweeping them up in giant scoop nets. Another big threat are longlines that have hundreds or thousands of baited hooks stretching out for more than a kilometer on or near the seafloor.

Fortunately, Australia is one of the few countries in the world best equipped to protect and save our threatened species – but only if we act now.

So how can we save our true-blue Aussie sharks and rays? Become a Shark Champion today and speak for those who cant!
